
Thermo Avantage Xps Software 24

spiritual needs (M = 12.8, SD = 6.5) and their perception of satisfied needs (M = 26.2, SD = 9.9) in comparison to the control group. The intervention group had higher scores on the SNAS than the control group, $t = 2.03$, $p = 0.049$. A spiritual intervention increases the patients' needs for spiritual care. The perceived needs of the intervention group were more satisfied than those of the control group. The spiritual intervention might have influenced the patient's understanding of the meaning of 'satisfaction' or 'unmet need'. The results underline the importance of spiritual care for the care of patients with serious illness. The positive results in this study show the need to further test and evaluate spiritual interventions by using a randomized controlled design. A pilot study of use of the eZON μ S in an academic emergency department. The Emergency Ultrasound Network of Oregon (eZON) is a multi-institution initiative that aims to develop and deploy an inexpensive, portable, wireless, handheld ultrasound system that would replace large, dedicated devices in the pre-hospital and emergency department settings. In this pilot study, we asked emergency physicians and nurses to utilize the eZON probe to assess patients with hypotension. Between July 31, 2012, and February 29, 2013, all patients presenting to the Emergency Department with hypotension were prospectively randomized to be scanned with either a large-scale eZON probe (group eZON) or a standard Sonosite M-turbo ultrasound system (group M-turbo). Six emergency physicians and three emergency nurses were trained to use the eZON; six physicians and
